

Agata Michalska is a full professor at the Faculty of Chemistry University of Warsaw (Warsaw, Poland). She has received PhD and DSc (habilitation) from the Faculty of Chemistry University of Warsaw. Her research interest is focused on ion-sensors operating using electrochemical or optical principles, in particular on understanding principle and mechanism of their operation, with interest to improve their performance and construction, among others benefiting from nanomaterials, especially nanofibers. She is an associate editor of *Talanta* (Elsevier).
