

Assoc. Prof. Dr. Rattikan Chantiwas is an Associate Professor in the Department of Chemistry, Faculty of Science, Mahidol University, Thailand. She is an analytical chemist specializing in innovative sensing technologies, miniaturized analytical systems, and surface modification techniques in capillary electrophoresis to enhance separation performance. Her research focuses on developing practical, high-throughput, and environmentally friendly analytical methods for applications in food safety, environmental monitoring, and biomedical analysis. Her work integrates green analytical chemistry principles with accessible detection platforms. She has authored 45 peer-reviewed articles indexed in Scopus, with an h-index of 13 and over 800 citations.
